## in All Positions

CURRENT SERIAL RECORDS

July 24, 1963

### CORN, SORGHUM, SOYBEAN AND WHEAT STOCKS LOWER

Corn led the decline in feed grain stocks on July 1 with a 14 percent smaller total than a year ago, according to the Crop Reporting Board. Stocks of sorghum grain were 8 percent less, oats totaled about the same, but barley stocks were 18 percent greater. The combined total of all feed grains held on July 1 was 11 percent less than last year. All wheat stocks at the end of the marketing year were 10 percent smaller than on July 1, 1962 in spite of a sharp increase in holdings of durum. Rye stocks were 12 percent less than a year earlier. Stocks of soybeans were 9 percent smaller than the large July 1962 holdings. Flaxseed held in all storage positions was more than double the small stocks of a year earlier.

All Wheat stocks in storage on July 1 totaled 1,189 million bushels -- 10 percent below a year earlier and marks the second year of decline from the record high carryover of wheat on July 1, 1961. Stores of wheat on July 1 were 9 percent greater than the 1962 production of wheat. Off-farm wheat stocks were 1,094 million bushels and those stored on farms amounted to about 95 million. Wheat owned by the Government made up more than 80 percent of the carryover stocks. Disappearance of wheat from all storage positions during the April-June quarter was 316 million bushels, slightly less than the record quarterly disappearance of a year earlier.

Durum Wheat stocks of 40.8 million bushels on July 1 this year compare with 5.2 million a year earlier. Carryover stocks a year ago were unusually low following a drought and low production in the durum area during the 1961 growing season. Disappearance of durum in the April-June quarter was 18.1 million bushels.

Rye stocks in all storage positions amounted to 7.0 million bushels, 12 percent below a year earlier and 35 percent below average. Carryover stocks of rye on farms were slightly larger than a year earlier but off-farm stocks were smaller. Disappearance of rye during the past marketing year amounted to 42.1 million bushels, the largest disappearance since the 1943-44 marketing season. Disappearance of rye in the past quarter was 8.3 million bushels.

UNITED STATES DEPARTMENT OF AGRICULTURE

Statistical Reporting Service

GrLg 11-1 (7-63)

Crop Reporting Board

Washington, D. C.

Corn held in all positions on July 1 totaled 2,118 million bushels -- 14 percent less than the 2,473 million on hand a year earlier and 9 percent less than the 1957-61 average. The drop from a year ago follows a decline of 12 percent during the July 1961-July 1962 period. Corn production in 1962 was slightly larger than the previous year but disappearance of corn exceeded a year earlier in the winter and spring quarters. Total off-farm stocks of 729 million bushels were 195 million less than a year earlier with nearly nine-tenths of the decline accounted for by smaller CCC ownership. Farm stocks of 1,390 million bushels were 10 percent smaller than the record high July 1, 1962 total.

Oats stocks in all positions, 277 million bushels, were almost the same as on July 1, 1962, but 9 percent less than average. July 1, 1963 farm stocks were 2 percent larger than a year earlier offsetting a decline in off-farm holdings. Oats owned by CCC made up about two-fifths of the off-farm stocks total. Disappearance of oats from all storage positions during the April-June quarter was 216 million bushels, equaling the record low for the same quarter in 1960, but well below the 1957-61 average disappearance of 251 million bushels.

Barley stored on July 1 totaled 146 million bushels. This was 18 percent larger than the relatively low July 1962 total, but 10 percent smaller than average. Production of barley in 1962 was 9 percent more than the previous year and more than made up for the small carryover of barley from earlier years. Off-farm stocks on July 1 this year were 4 percent more than a year ago, but farm stored barley jumped nearly 40 percent above last year. CCC owned about one-fourth of the total barley held in all positions on July 1. Disappearance during the April-June quarter was 86 million bushels, slightly less than the average of 88 million.

Sorghum grain stocks in all positions of 690 million bushels on July 1 were 8 percent less than a year earlier but 46 percent more than average. All of the decline from a year earlier was in off-farm stocks with a drop from 704 million bushels held on July 1, 1962 to 644 million bushels on July 1 this year. Farm stocks of 46 million bushels compare to 41 million on hand a year ago. Disappearance of sorghum grain from all storage positions during the April-June quarter was a record 136 million bushels partly because of the heavy feeding requirements in the dry areas of the Southern and Central Flains.

Soybean stocks in all storage positions totaled 138 million bushels, 9 percent less than a year earlier. Decreases from last year occurred in both the farm and off-farm holdings. Nearly three-fourths of the total stocks were in off-farm storage positions, about the same as a year earlier.

\* Included in other States

1/ Includes stocks at Mills, Elevators and Warehouses, terminals, processors and those owned by Commodity Credit Corporation which are in bins and other storages under C.C.C. control.

2/ Off-farm total plus farm stocks.

July 1 stocks indicate a disappearance during the 9 month period (October 62-June 63) of 595 million bushels from a supply of 733 million bushels (carryover of 58 million bushels plus 1962 production of 675 million bushels). Recorded disappearance for the period included 365 million bushels processed for oil and about 146 million bushels exported. Soybeans used for seed and feed are expected to total about 36 million bushels.

Flaxseed stocks on July 1 in all storage positions, 8.3 million bushels, were more than double a year earlier but still a fifth below the July 1957-61 average. This increased carryover since July 1, 1962 reflects the size of the 1962 crop which was the highest total production since 1958. Four-fifths of the total stocks were in off-farm positions. Disappearance of flaxseed during the year ending July 1 based on ending stocks was 27.3 million bushels from a supply of 35.6 million bushels. During this period, crushings were 21 million bushels, exports 4.5 million bushels, and about 2.2 million bushels were used for seed.

The data in this report are assembled by the Crop Reporting Board, bringing together stocks of CCC owned grains reported by the Agricultural Stabilization and Conservation Service as stored in bins, ships, and other storages under CCC control and estimates of the Crop Reporting Board for stocks on farms and at mills, elevators, warehouses, terminals, and processors.
